HELLFIRE II

Effective Against 21st Century Threats

HELLFIRE II

AGM-114R Multi-Purpose Missile

The HELLFIRE II is a precision strike, semi-active laser (SAL) guided missile, able to defeat a broad range of targets. Its multi-mission, multi-target capability with precision-strike lethality provides field commanders maximum operational flexibility.

The AGM-114R consolidates all previous SAL HELLFIRE II variants into a single missile. The HELLFIRE II can neutralize a broad target set with its multi-purpose warhead instead of requiring the use of multiple warhead types. Targets include armor, air defense, patrol boats, as well as enemy combatants in buildings, open areas, SUVs or caves. This enables pilots to meet many contingencies with a single HELLFIRE loadout—one missile for many missions. The inertial measurement unit provides a wide engagement zone for properly-equipped platforms to fire upon targets behind them and to the side.

HELLFIRE II may be employed autonomously or with remote designation, using either lock-on before launch (LOBL) or lock-on after launch (LOAL) for increased platform survivability. The missile can launch from various platforms, including rotary- and fixed-wing aircraft, ground vehicles and boats.

- Multi-purpose warhead enables HELLFIRE II to defeat a broad range of targets
- Wide-area engagement zone, capable of defeating targets to the side or behind the platform
-
